

RESIDENTIAL AND SMALL NON RESIDENTIAL STANDARD OFFER SERVICE CONSUMER INFORMATION ABOUT YOUR ELECTRICITY SUPPLY

Electricity suppliers in Maine must, by Maine law, provide fact sheets, or “uniform disclosure labels” from time to time to educate consumers about their electricity service. Your electricity is delivered by Central Maine Power Company and Emera Maine Electric, but the electricity itself is supplied by:

This fact sheet provides consumer information about the power sources and air emissions of service provided by this electricity supplier.

Air Emissions

(2017 Projections¹)

This table compares air emissions from this supplier's electricity mix to average emission levels from all New England power sources

	Supplier's Mix (lbs/MWh)	New England Mix (lbs/MWh)
Carbon Dioxide (CO ₂)	909.97	909.97
Nitrogen Oxide (NO _x)	0.97	0.97
Sulfur Dioxide (SO ₂)	1.54	1.54

Notes: lb/MWh = pounds per Megawatt-hour
1 Megawatt-hour = 1,000 kilowatt-hours

Additional Information and Required Notes:

¹Energy Rewards' 2017 Projections are based upon the actual ISO-NE data for power sources and air emissions from January 1, 2017 to December 31, 2017.

ENERGY REWARDS GREEN RENEWABLE ENERGY CONTENT — Energy Rewards purchases Renewable Energy Credits from wind sources, equivalent to 100% of the electricity load used by its customers purchasing a 100% renewable product. For more information on environmental impact, please visit CCIEnergyRewards.com.

POWER SOURCES — Maine law requires retail electricity providers to periodically provide information to their customers on the mix of power sources used by the provider to serve their Maine customers' load.

EMISSIONS — Carbon Dioxide (CO₂) is released when certain fuels are burned. It is considered a greenhouse gas and a major contributor to global warming. Nitrogen Oxides (NO_x) form when certain fuels are burned at high temperatures. They are considered contributors to acid rain and ground-level ozone (or smog). Sulfur Dioxide (SO₂) is formed when fuels containing sulfur are burned. Major health effects associated with SO₂ include asthma, respiratory illness and aggravation of existing cardiovascular disease. The production of electricity can produce other harmful emissions and have other environmental impacts. Environmental impacts differ among individual power plants.
